

Krypton Level 0 - Level 1

We are given a string that has been encoded in base64. First step is to decode this string.

```
ubuntu@ubuntu:~$ echo S1JZUFRPTk1TR1JFQVQ= | base64 -d  
KRYPTONISGREATubuntu@ubuntu:~$
```

Using the -d to decode we pass the string to base64 function to decode.

Password to level 1 is KRYPTONISGREAT.
